

PUBLIC NOTICE

27th February 2020

THE CITY OF KIGALI IS PUBLISHING THE SOIL TESTS (GEOTECHNICAL DATA) OF KIGALI (PHASE I)

To make Kigali a more attractive place to do business, the City of Kigali is always working on improving the business environment. We are constantly working on reforms that will make applying for construction permits much faster, easier and less costly.

With our stakeholders, we have identified bottlenecks to private sector development and proposed relevant solutions that will ease doing business in the construction sector of Kigali.

In order to avail the data on the soil characteristics (**Geotechnical studies**), The City of Kigali has done a soil test parameters (**Dynamic cone penetration, Sieve analysis and Atterbag limit**) of all villages located in Phase I of the Kigali City masterplan implementation plan.

The City of Kigali has published the soil test results and can easily be accessed by professionals in the construction industry-Consultants, Engineers, Architects etc. The soil test results are available online on these websites: www.kigalicity.gov.rw, www.bpmis.gov.rw, www.engineersrwanda.rw , www.riarchitects.rw.

The City of Kigali will continue to test the soil of other parts of the city located in other phases of Kigali City Masterplan to facilitate our stakeholders. The City of Kigali will continue to make bold and ambitious steps to improve our business environment in dealing with construction permits.

Let us continue working together for the development of our city.

RUBINGISA Pudence
Mayor, City of Kigali
